

# REDPEG 2026-2029 STRATEGIC VISION

You Envision It. We Build It.

The Actualization Thesis

---

The market is producing visions faster than ever. AI, internal creative teams, and consultancies are generating briefs, renders, and strategies at unprecedented speed. The bottleneck has moved. It's no longer 'who has the best idea.' It's 'who can make it real.' This document lays out why RedPeg should own that position, and how it drives every decision about marketing, hiring, pricing, and growth.

Internal Document | March 2026 | Confidential | ELT Review

## 1. Where We Are

An honest financial read of RedPeg as of March 2026.

### The Post-GEICO Reality

GEICO was an \$11M/year retainer, 60%+ of revenue. It subsidized every non-billable function. When they left two years ago, headcount went from ~80 to 37. The creative team shrank to 6. The agency has been rebuilding since.

### Historical P&L (Through Q3)

| Year               | Gross Profit | Net Income  |
|--------------------|--------------|-------------|
| 2020               | \$5,400,000  | \$150,000   |
| 2021               | \$5,150,000  | (\$750,000) |
| 2022 (peak)        | \$9,650,000  | \$1,200,000 |
| 2023 (GEICO exits) | \$8,150,000  | \$125,000   |
| 2024               | \$6,650,000  | \$225,000   |
| 2025               | \$7,000,000  | \$525,000   |

The recovery is real. GP climbed to \$7M, net income to \$525K. But Q1 2025 showed the fragility: \$1.93M GP vs. \$2.36M budget, (\$90K) net loss. Marriott (\$3.15M) and Scopely (\$2M) represent half the budgeted GP.

### \$433K in Financial Waste (March 2026 Analysis)

**Over-delivery: \$193K.** Hours beyond scope on signed contracts. Revenue earned, never billed.

**Unsigned work: \$165K.** Toei (425 hrs), Joola (293 hrs), Coke+Marriott (382 hrs). Work started before signatures.

**Excess admin: \$113K.** Billable capacity consumed by internal overhead.

### The Scopely Rate Problem

Flat \$135/hour, no seniority tiering. Proper structure (\$135 coordinator / \$175 director / \$220+ VP) adds \$700-800K annually on the same work. This is the single highest-leverage pricing decision available.

---

## 2. The Market Shift: The Bottleneck Moved

## The Core Thesis

For 20 years, the bottleneck in experiential marketing was the idea. Brands needed agencies to think for them. AI and in-house creative teams changed that. The bottleneck has moved downstream: from vision to actualization.

Brands can now generate strategies, concepts, and renders faster than ever. What they cannot generate is a permitted venue, a fabricated stage, a trained crew, or a flawless on-site experience for 80,000 people.

The agencies that only do the thinking are about to get disrupted. The agencies that do the building just got a much larger addressable market. RedPeg is the second kind.

## What Clients Now Bring to the Table

The modern experiential client arrives with more of the front end already done. They have internal creative teams generating concepts. They use AI tools to produce renders and visualizations. They hire consultancies or use their AOR for strategic planning. Some have full activation briefs ready to hand off.

What they are increasingly looking for is a partner who can take that vision and actualize it. Translate the concept into engineering. Manage the fabrication. Handle the logistics. Run the event. This is not a downgrade in the work. It is the most complex, highest-stakes, highest-value part of the process. And it's the part where failure is visible, public, and expensive.

## Why This Is Good for RedPeg

More briefs getting generated means more activations getting greenlit. More activations getting greenlit means more demand for production and execution capability. The AI revolution is expanding our addressable market, because every AI-generated concept that gets approved needs someone to build it.

The agencies positioned as 'thinkers' are competing with AI tools and holding company consulting arms. The agencies positioned as 'builders' are competing with... nobody at our level who also understands the creative and strategic context of what they're building. That's the gap RedPeg fills.

## The Creative Producer: The Bridge Role

The critical hire: creative producers who sit between concept and build. They read an AI render and know what it costs to fabricate. They translate a mood board into production specs. They look at a concept and know the LED panel needs a different power source before anyone orders it. This role is RedPeg's competitive moat for 3-5 years.

---

## 3. The Vision

## Positioning

You envision it. We build it.

RedPeg is the independent production and experience agency that turns any vision, AI-generated, agency-created, or sketched on a napkin, into a flawless real-world experience. We are the actualization layer of experiential marketing.

## The Tagline System

**Hero:** "AI Thinks It. We Build It." — Immediate, confrontational, positions RedPeg as the partner for the AI era. Speaks directly to the client: your AI is powerful, and we're the team that finishes what it starts.

**Supporting:** "You Envision It. We Build It." — Broader version for contexts where the AI reference feels too narrow. Works for any client regardless of how they generate concepts.

**Tone-setter:** "The last mile of every experience is still human. We've owned that mile for 30 years." — Authority. Not defensive about AI. Not claiming AI expertise. Just stating the fact.

## What We Lead With

Production capability. Operational track record. Scale and reliability. The proof is in what we've built: 80,000-person festivals, 87-property global programs, a 3-year Nike leadership program with 10-12 cohort setups and teardowns, 15 In-N-Out employee picnics a year, artist VIP tour experiences across dozens of cities.

## What We Tuck In

Strategy, ideation, creative concepting, AI fluency. These are real capabilities that make the execution better. We mention them. We demonstrate them when appropriate. But they are not the headline. The headline is: you bring the vision, we make it physical. Of course we can help with the vision too, and often do. But the product is the actualization.

---

## 4. Three Execution Specialties

Every project maps to one of three specialties. All three are execution-led. The client brings the vision, the content, the strategy. We translate, engineer, produce, and deliver.

### Specialty 1: Large-Scale Events

Festivals, sponsorship activations, mobile tours, pop-ups, trade shows, consumer activations. End-to-end production from concept translation through on-site execution. Any scale, any market, any timeline.

**What the client brings:** The brief, the concept, the brand guidelines, the activation goals. Sometimes an AI-generated render. Sometimes a PowerPoint. Sometimes a phone call.

**What we deliver:** CAD translation, fabrication management, venue procurement and permitting, vendor packages, staffing and labor management, logistics and shipping, load-in/load-out, on-site production management, post-event reporting.

**Proof:** Scopely/Pokémon GO Fest (80K attendees, Rose Bowl + Chicago, multi-city). Marriott Snow League (multi-country sponsorship activation). Santander/OpenBank F1 Miami (Fan Zone + VIP Villa). Meta COA Suite. Virginia Lottery programs. Bandai Namco Comic-Con.

**Targets:** Brand marketing directors, VP experiential, sponsorship leads. Gaming, CPG, financial services, hospitality, sports.

## Specialty 2: Employee Experiences (B2E)

Internal conferences, leadership development programs, corporate culture events, employee engagement activations. The client provides the content and strategic framework. We build the environment, manage the production, and run the show.

**What the client brings:** Curriculum, content, speakers, brand themes, attendance numbers, objectives. Nike brings the leadership development curriculum for Leading SD. In-N-Out brings the picnic theme. USAA brings the convention agenda.

**What we deliver:** Environment design and fabrication, AV and technology, setup and teardown (10-12 cohorts for Nike Leading SD), digital experience builds, staffing, venue management, registration systems, on-site production.

**Proof:** Nike CVTS (employee convention, 3+ years, full environment build). Nike Leading SD (VP/senior director L&D, 3 years, 10-12 cohorts with full room setup/teardown for each). In-N-Out Family Picnics (15 annually). USAA Affairs Activations and Conventions. Obsidian Employee Appreciation. Fannie Mae corporate events.

**Targets:** VP People/HR, Chief People Officer, L&D Directors, Corporate Event Managers. Tech, financial services, insurance, QSR, government-adjacent.

**Why this matters:** Almost no experiential agency names this as a specialty. The buyer (VP People, not VP Marketing) isn't being courted. The work is recurring, high-margin when properly scoped, and deeply sticky. This is a wide-open lane.

## Specialty 3: Music Partnerships

Artist tour VIP experiences, festival brand activations, music programming and consulting. Deep Cuts Entertainment, our in-house music subsidiary with 60+ years of combined industry expertise, is the engine. Partnership-driven: we connect brands to artists and build every piece of the experience.

**What the client brings:** Brand objectives, partnership goals, budget parameters. Marriott wanted to drive Bonvoy enrollment through music. Yuengling wanted to launch Flight beer through an artist partnership.

**What we deliver:** Artist matching and negotiation (talent-agnostic, brand-first), VIP experience design and production, on-tour activation management, brand integration across venues,

partnership ROI measurement. Full production from design through on-site execution across dozens of tour dates.

**Proof:** Marriott Bonvoy x Taylor Swift (87 properties, 1.6M entries, 500K+ enrollments, 3B+ impressions). Yuengling x Imagine Dragons (600K+ impressions, 15M packaging placements). Active tours: Lindsey Stirling, Kesha, Dierks Bentley. Marriott Bonvoy x Beyoncé. Marriott Culinary music programming.

**Targets:** CMOs at lifestyle brands, artist management, label marketing, festival brand partnerships, hospitality brands.

---

## 5. Voice and Messaging

### Core Message

*You envision it. We build it.*

Every piece of communication reinforces this. We are the actualization layer. The last mile. The team that makes the thing physical. Sophisticated, confident, like a high-end fabrication house that happens to work in experiences instead of supercars.

### Voice

| Attribute             | Sounds Like                                 | Never Sounds Like                         |
|-----------------------|---------------------------------------------|-------------------------------------------|
| Builder Confidence    | We've built this. Here's what it took.      | We envision a transformational journey... |
| Precision             | 80K people. One venue. Zero failures.       | We create meaningful experiences...       |
| Client's Vision First | You bring the concept. We make it real.     | Our strategic framework drives...         |
| Track Record          | 3 years running Nike's leadership program.  | We believe in employee experiences.       |
| Understated Expertise | The fire marshal won't approve that egress. | We leverage proprietary frameworks...     |
| Independent           | We answer to the work.                      | Our global network of partners...         |

### The Elevator Pitch

Every version follows the same structure: Problem → Product → Result. State the tension, introduce RedPeg, land the outcome. No labels, just the rhythm.

### Version 1 — The Ten-Second

*"Your AI can generate a brilliant activation concept in an afternoon. It can't build it. RedPeg turns those visions into real-world experiences. Your consumers get the moments your data says they deserve, built by the team that's never missed a curtain call."*

### Version 2 — The Cocktail Party

*"Brands have never been better at imagining experiences. AI renders, internal creative teams, strategy decks in a day. But great ideas are dying in the digital ether because nobody can make them physical. That's RedPeg. 30 years of taking concepts and building them: permits, fabrication, staffing, the whole last mile. Your brand shows up in the real world the way your AI imagined it."*

### Version 3 — The Opener

*"Every brand in the room has access to the same AI tools. You can generate a festival concept in an afternoon. The renders look incredible. And then it sits there, because the gap between an AI render and a built stage is permits, vendors, crew calls, and a hundred decisions that take experience. RedPeg closes that gap. Three specialties, large-scale events, employee experiences, music partnerships, all execution-led. Your 80,000-person festival runs flawlessly. Your leadership program transforms 10 cohorts. Don't let great ideas stay trapped in the ether."*

### Version 4 — Brad at a Dinner

*"Brands have never been better at imagining experiences. We're the team that actually builds them."*

### Version 5 — The Close

*"Your AI helped craft it. Your data points to it. Your consumers deserve it. Don't let it stay unrealized. RedPeg has been making ideas physical for 30 years. AI thinks it. We build it."*

#### The Formula

Problem: Your AI / your team / the market created something great. It's stuck in the digital ether.

Product: RedPeg takes it from screen to street. 30 years of production, fabrication, logistics, execution.

Result: Your consumers get the experience they deserve. Built, not just imagined.

Learn it. Riff on it. Every version follows the same three beats.

## Where Strategy and AI Fluency Live

These are real capabilities. They live in supporting copy, in the 'Why RedPeg' section of the site, in case study details, and in conversations with prospects who need upstream help. The language: "We're fluent in AI, too. When you need help upstream, we're there. But our product is the actualization." This acknowledges the capability without making it the headline. A high-end fabrication shop doesn't advertise that they also sketch, they advertise what rolls out of the shop.

## 6. Website Architecture

| Page                 | Content                                                                                                                                                                                             |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Home                 | Video hero: brand reel, B&W/grayscale. 'AI Thinks It. We Build It.' Three-step value prop (you bring vision → we translate → we build). Three specialty cards. Proof bar. Work grid. Partners. CTA. |
| Specialties (nav)    | Links to three specialty pages below.                                                                                                                                                               |
| Large-Scale Events   | Production capabilities. Case studies: GO Fest, Snow League, F1 Miami, Comic-Con. 'What you bring / what we deliver' format. Client logos.                                                          |
| Employee Experiences | B2E focus. Case studies: Nike CVTS, Leading SD (10-12 cohorts), In-N-Out (15 picnics), USAA. The named lane nobody else owns.                                                                       |
| Music Partnerships   | Deep Cuts as engine. Taylor Swift, Imagine Dragons, active tours. Artist portfolio. Brand partnership model.                                                                                        |
| Work                 | Full portfolio, filterable by specialty. Each case study: 'They envisioned it. We built it.' format. Result first, production story second. Metrics in text.                                        |
| About                | 30-year history, team bios with credentials, values. 'We're fluent in AI, too' supporting statement lives here.                                                                                     |
| Insights             | Pulse, Direct Hit, blog. Thought leadership on execution, production, B2E, music.                                                                                                                   |

Key structural decisions: 'Music' drops from top-level nav and becomes one of three equal specialties. 'Capabilities' page disappears; each specialty page includes its own execution capabilities written for that buyer. The 'Our Approach' / AI philosophy content becomes a supporting section on the home page and the About page, not a standalone page.

## 7. Content and Social Strategy

| Pillar           | What It Covers                           | Example                                                          |
|------------------|------------------------------------------|------------------------------------------------------------------|
| How We Built It  | Production stories, BTS, build processes | "80K people. One venue. The production timeline behind GO Fest." |
| The Numbers      | Business results, scale metrics          | "500K new members from one activation. Here's the production."   |
| The B2E Playbook | Employee experience insights             | "What Nike does differently with their leadership program."      |

|                    |                                             |                                                                      |
|--------------------|---------------------------------------------|----------------------------------------------------------------------|
| Deep Cuts Sessions | Music partnership stories                   | "How we matched Marriott with Taylor Swift. The deal and the build." |
| Ops Intelligence   | Permitting, fabrication, staffing expertise | "The 5 permit mistakes that kill activations."                       |

LinkedIn: primary channel. Brad 1x/week (founder authority, industry POV). Production leads 1x/week (BTS, build stories, content no agency can fake). Music/Deep Cuts 1x/week (artist partnerships, tour production). Instagram: visual proof of execution quality, build process, on-site energy.

The single most valuable content play: become the voice on what happens after the brief. The execution stories, the production timelines, the permit nightmares, the crew call logistics. This is content that AI-first agencies literally cannot produce because they don't build things. It's an uncontested content lane.

---

## 8. Hiring

**Priority 1: 2 Creative Producers.** The bridge between concept and build. Read CAD, manage vendors, translate AI renders into fabrication specs. This role defines RedPeg's value proposition.

**Priority 2: 1 Creative Director.** Designs for buildability. Fills the Scopely 'TBD' gap. Can art-direct generative outputs AND talk to fabricators.

**Priority 3: 1 B2E Specialist.** Corporate events and employee experience background. Develops and sells Specialty 2. Targets the VP People buyer.

**Priority 4: 1 Content/Marketing Lead.** Creates the 'How We Built It' content. Manages LinkedIn cadence. Ensures the website and social presence reinforce the actualization positioning.

---

## 9. Financial Actions

| Action                       | Timeline     | Impact                     |
|------------------------------|--------------|----------------------------|
| Scopely rate renegotiation   | Next renewal | +\$700-800K annually       |
| Rate floor \$155/hr          | Immediate    | Pricing foundation         |
| Sign-or-stop unsigned work   | This week    | \$165K exposure resolved   |
| Over-delivery scope protocol | 30 days      | \$193K+ recovered annually |
| Website relaunch             | 60-90 days   | Repositions all inbound    |

|                              |         |                             |
|------------------------------|---------|-----------------------------|
| B2E as named specialty       | 60 days | Opens VP People buyer       |
| 1 new B2E client             | 90 days | \$250-500K pipeline         |
| Gaming outreach with GO Fest | 45 days | 2-3 qualified conversations |
| Execution thought leadership | 30 days | Uncontested content lane    |

---

## 10. The Filter

Every decision about what RedPeg says, shows, builds, hires, and pursues:

***Does this demonstrate that we are the most capable, most reliable team to take a vision from concept to physical reality?***

If yes, do it. If it primarily demonstrates that we're creative, or strategic, or tech-forward, ask whether it also demonstrates that we build. Those capabilities support the product. The product is the actualization.

### **The Positioning in One Paragraph**

RedPeg is a 30-year-old independent production and experience agency. The market is producing visions faster than ever. AI tools, internal creative teams, and consultancies are generating briefs, concepts, and renders at a pace that didn't exist two years ago. The bottleneck moved. It's no longer who has the best idea. It's who can make it real. We can. We have three specialties: large-scale event production, employee experiences, and music partnerships through Deep Cuts. You bring the vision. We bring 30 years of making it physical, flawless, and unforgettable.
